Open this first: **DUNA — Feasibility Dossier.**

Hicham — DUNA is yours. The whole package: the machine, the engineering truth, and the fundable story, all speaking with one name.

Open the investor deck first — it's the pitch, 26 slides built to survive a technical Q&A, and it opens on the machine with DUNA on the cover. Underneath it sits the feasibility dossier: the 20-page answer to your first question, "can this be built for real?" It can, and the document proves it the honest way — the ~157 kg mass budget summed component by component, range shown as a fuel-tank question, and the ~20 kW power assumption named on page one as your strength with a plan to close it, not buried for a diligence engineer to find. Every number in both documents traces to a single source of truth, and the reference specs come from KTM and Honda's own pages.

The machine itself — Exposed Core in stealth graphite, one true form — rides alongside as the hero set: the side profile that is the whole argument in a frame, the exposed-core honesty shot, and the Baja golden-hour hero.

Two honest notes so nothing surprises you. The deck ships as a PDF and an editable PowerPoint — open the PowerPoint version to present, it renders exactly as designed with the fonts installed; the PDF is the quick-look. And the load-bearing numbers are labeled as honest engineering estimates where they are estimates — that's deliberate, it's what lets the package survive the mechanical engineer and the VC in the same room.

Sit with it. And there's still one open call I want your instinct on: a hero film — a walk-around of the machine, the premium piece. Renders alone tell the story; a film makes someone feel the machine move. Say the word if you want it and I'll scope it.

What is in the kit

1 **DUNA — Feasibility Dossier** (open this first)

`dossier/feasibility-dossier.pdf`

The engineering truth underneath the pitch — 20 pages, every number traced to a single source. Hand this to a mechanical engineer in diligence.

2 **DUNA — Investor Pitch Deck**

`deck/investor-deck.pdf`

The fundable story, grounded in the engineering truth — 26 slides built to survive a technical Q&A. Open this to pitch.

3 **DUNA — Investor Deck (editable PowerPoint)**

`deck/investor-deck.pptx`

The same deck, editable — yours to tune the ask, the team slide, or the numbers as the raise takes shape.

4 **DUNA — Hero, side profile**

`Extras/DUNA - Hero/hero-side-profile.jpg`

The machine, the argument in one frame — the packaging story, honestly electric.

5 **DUNA — Hero, three-quarter front**

`Extras/DUNA - Hero/hero-three-quarter-front.jpg`

6 **DUNA — The exposed core**

[Extras/detail-exposed-core.jpg](#)

The honesty shot: battery block in the cradle, round electric motor, no engine to hide.

7 **DUNA — Electric motor + chain drive**

[Extras/detail-motor-housing.jpg](#)

8 **DUNA — Long-travel front end + twin radiators**

[Extras/detail-front-end.jpg](#)

9 **DUNA — Roadbook nav mast & cockpit**

[Extras/detail-nav-mast.jpg](#)

10 **DUNA — In the Baja desert, golden hour**

[Extras/hero-desert-inworld.jpg](#)
