Open this first: **Your luxury hybrid SUV decision — the full report.**

Here's your decision, whole and ready to act on. The call is the Lexus RX 350h AWD, leased — a self-charging hybrid that fits your no-plug reality and sips fuel on that 90-minute round trip. Page 2 gives you the bottom line and the one honest safety trade I wanted you to see rather than have buried. From there: the three lines side by side on the numbers that matter, the fuel-cost math at California prices, your lease targets built to your real ~20k-mile-a-year commute (with the mileage-cap trap shown plainly so no salesperson talks you down to a cap that costs you thousands at lease-end), the three things to make them quote — residual, money factor, due at signing — and your dealer call list for both Palm Springs and Newport/OC, with the exact department to ask for, a ready-to-read phone script, and a live "see current inventory" link into each store's own lot. Every figure is dated and pulled from the source's own page today.

What is in the kit
