

Grand Prix Landing

What's inside, and what to open first:

1. **Hero frame — landing side, off the shoulder** ([1 · Hero frame - landing side, off the shoulder.jpg](#)): Open this first. The shot you lit — ground level on the landing side, horse cresting the oxer at full effort, low warm light rimming the outline, dust off the takeoff.
2. **Second angle — head-on at the fence line** ([2 · Second angle - head-on at the fence line.jpg](#)): The comparison frame, straight down the fence line, so you can hold the two angles against each other.
3. **Hero jump — the animated loop** ([3 · Hero jump - the animated loop.mp4](#)): The hero still set into motion — the horse crests the oxer and lands the far side, dust hanging, the rim light raking across. A short silent loop, built straight off the frame you approved. Open this first.

Everything here also arrives as one zip: the Download kit.
