

Spiti Event Concierge Portal

What's inside, and what to open first:

1. **Spiti — the running portal** (`1 · Spiti - the running portal/server.js`): Open this first. The working Spiti — sign in as OC Operations, a store manager, a brand approver, the hotel, the transport company, or view the guest itinerary, all driven by one shared event. Press “Delay 90 min” on a guest's flight and watch the driver, the hotel, and the itinerary re-time themselves from one write. START-HERE and RUN.md walk you from this folder to a live address.
 - **Deployment guide — for the technical team** (`1 · Spiti - the running portal/DEPLOYMENT.pdf`): Hand this to his engineers. It walks standing the portal up on his own server end to end, and documents the exact steps to migrate his live guest records on his side, the discreet way.
 - **RUN.md — from this folder to a live address** (`1 · Spiti - the running portal/RUN.pdf`): A step-by-step guide written for someone who has never opened a terminal: where to host it (real platforms, today's prices), how to keep every secret in your own hands, and the one-time font step. Come back to the chat at any step and I'll walk you through it.
 - **Start here** (`1 · Spiti - the running portal/START-HERE.pdf`): What's in the package and what to open first, in plain language.
2. **Spiti — Brand & Product Identity (Volume One)** (`2 · Spiti - Brand & Product Identity (Volume One).pdf`): The house style: the Spiti wordmark, palette, typography, tone, and the co-branding system shown flexing across a maison, a jeweller, and an auto marque — each convincing, OC Travel signing quietly beneath.
3. **Spiti — Buildable Spec Dossier (Volume Two)** (`3 · Spiti - Buildable Spec Dossier (Volume Two).pdf`): The build book: every screen annotated, the need-to-know permission walls drawn as a feature, the data model, the edge cases, and the flight-delay ripple shown as one write fanning to four surfaces. Hand this to any developer and they can carry Spiti forward.

Filed under Extras (reference and supporting material):

- **Cover Arrival** (`Extras/Cover Arrival.jpg`)
- **Detail Invitation** (`Extras/Detail Invitation.jpg`)
- **Metallic Detail** (`Extras/Metallic Detail.jpg`)
- **Threshold Show** (`Extras/Threshold Show.jpg`)

- **Spiti Wordmark** (Extras/Spiti Wordmark.svg)

Everything here also arrives as one zip: the Download kit.
