That's five newsrooms now, Hicham — and this is the one you already blessed with your own ear. Open Zellij 7 — أخبار العاشرة with sound: Kawtar Bensouda at the desk, Marrakech at night behind her — the lit minaret, the medina walls, the Atlas — reading the AI-battery breakthrough in real, spoken Moroccan Darija, the way an anchor actually talks to camera in Casablanca or Rabat. Her lower-thirds run in formal Arabic, right-to-left, the way Moroccan bulletins really do it — the anchor speaks

Darija, the graphics are MSA — and the English captions track her phrase by phrase along the bottom. Her own anchor, her own fictitious station, nothing borrowed from the other four.

It joins the full set on your workbench: your original English (Elena Marsh, Harbor City 6), the French (Camille Vernier, Orée Info), the Arabic (Salma Al-Attar, Marsa 9), and the Spanish (Renata Olmedo, Albor 5). The five scripts ride alongside, each with the read, the caption timings, and a gloss of every graphic.

Two honest notes. One — it runs 36.5 seconds, a touch over the ~34 of the set, because Darija in this voice reads a little slower even after the script was trimmed. If you want it tight, say so and Desmond re-reads it in the same voice; otherwise the pacing holds. Two — same as the rest: it looks like a genuine newscast with a realistic anchor who doesn't exist, so wherever you post it, let it carry that platform's AI-content label (and the EU disclosure where that applies), so it's never mistaken for real news.

If a line should shift in any of them, just say the word.

What is in the kit
