Anchor read: "AI Designs Its Own Battery" (~30 s)

Anchor: Elena Marsh (fictitious) **Station:** Harbor City 6 (fictitious) **Story source:** the Carrow Institute (fictitious)

[CAM 1 — medium, desk]

Good evening. Tonight, a breakthrough researchers are calling a turning point for artificial intelligence.

A team at the Carrow Institute says its AI system designed, tested, and confirmed a brand-new battery material — entirely on its own — in just eleven days. Work that would normally take a lab years.

[CAM 2 — medium close-up]

The material could mean electric cars that charge in minutes, not hours. But it also raises a bigger question: what happens when machines start doing the science themselves?

We'll have the full story, right after this.
